

## REMARKS

The Examiner has rejected claims 1, 3-6, 8-15, 17-20 and 22-28 under 35 U.S.C. 102(b) as being anticipated by Baba. To anticipate a claim, all of the limitations of the claim must be found either explicitly or inherently in the four corners of the reference. The claims have been amended to recite a head worn device that can display both a robot image and a remote station image. Baba does not disclose this limitation.

The recited claims of the above entitled application can be viewed as a mobile teleconferencing station. The robot has both a camera for capturing a robot image and a monitor for displaying a remote station image. The system further includes a head worn device that displays both the remote station and robot images. This allows a user at a remote station to not only view the image provided by the robot camera, but also see the image being displayed by the robot monitor. Baba does not disclose this limitation. Although the robot of Baba includes a display, column 11, lines 50-55 states that the display displays data, not a camera image. Consequently, Baba does not contain an essential element for creating a mobile video conferencing system - a monitor that displays a remote station image. Additionally, the head worn device does not display both robot and remote station images as recited in the claims of the above entitled application. For these reasons, the Applicant submits that Baba does not anticipate 1, 3-6, 8-15, 17-20, and 22-28.

The Examiner rejected claims 2, 7, 16 and 21 under 35 U.S.C. 103(a) as being unpatentable over Baba in view of Pin. The Applicant submits that these claims are allowable for being dependent upon allowable independent claims.

In view of the above, it is submitted that the claims are in condition for allowance.

Reconsideration of the rejections is requested. Allowance of claims 1 - 28 at an early date is solicited.

Respectfully submitted,

IRELL & MANELLA LLP
